

How has the Stainless Steel Crank Arm changed?

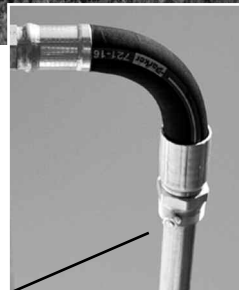

Our **Stainless Steel Crank Arm** for Cable-Lok™ spool roll tarps has been redesigned for affordability and ease of installation. This one-piece arm is also better able to resist the corrosion that goes hand-in-hand with hauling fertilizer.

The arm can be positioned at the side or rear of the box for the lowest possible profile. It utilizes the same polymer crank handle for a sure and comfortable grip, even in cold, wet weather. It uses the same swiveling crank retainer for convenient snap-in attachment and the non-collapsible, reinforced flexible hose assembly that allows the arm to move the roll tube freely and easily across the end caps.

For additional information about Shur-Co® products, give us a call at **1.800.474.8756** Monday through Friday, from 8:00 a.m. to 5:00 p.m. Central Time. Our friendly and knowledgeable Customer Service Representatives will be happy to answer your questions. Or log on to our website at www.shurco.com.

The Cable-Lok's new stainless steel arm (shown below) is a more economical selection than the previous arm (above).
