

## How can I upgrade from the original SMARTransmitter® to the new SMART1 +™ remote?

The new **SMART1 +™** has the same basic functionality of the popular SMARTransmitter®, *plus* additional features our customers have been requesting, including 10 to 15 percent better range, EXPRESS mode capability, automatic turn-off if a stall condition is detected and use of two AAA batteries for longer life (easy to change out, too, with one-screw removal).

To upgrade to the **SMART1 +™** remote from the original SMARTransmitter®, the quick explanation is as follows:

- 1) Remove the old solenoid covers and solenoid
- 2) Discard the old transmitter and the above items
- 3) Install the new solenoid and solenoid covers
- 4) Program the new remote to the new solenoid cover

Specific instructions for hardware replacement can be found on our website, at [www.shurco.com](http://www.shurco.com). Reference the following instruction numbers depending on what system you are planning to upgrade.

P/N 1123776 – For 4500 Series Systems

P/N 1123777 – For 4500 Series HD Systems

P/N 1123778 – For ProTrap® Systems

P/N 1123779 – For Swing Auger Systems

Complete details on pairing the new **SMART1 +™** remote to the new solenoid cover can be found in manual P/N 1123159.

For additional information about Shur-Co® products, call us at **1.800.474.8756** Monday through Friday, from 8:00 a.m. to 5:00 p.m. Central Time. Or log on to our website at [www.shurco.com](http://www.shurco.com).

Above: The Original SMARTransmitter can be easily upgraded to the new SMART1+™ remote (inset). The SMART1+™ has the same easy-to-use five-channel interface and patent-pending flip lid but with additional features, including better range.
