NOTE: Use lock washers and nuts with self-tapping screws whenever possible. A minimum material thickness of 3/16" is required in order to use self-tapping screws without lock washers and nuts. Drill 13/32" holes if lock washers and nuts are used. Drill 5/16" holes if lock washers and nuts are not used.

NOTE: Read entire section before drilling holes. Determine if rivets on front of trailer are centered or off center.

FRONT OF TRAILER

STEP 1: Locate front pivot mount bracket on passenger side of trailer so center of pivot lies within shaded area shown below. Measure 41" down from top of cap or 43" from top of windshield.

NOTE: Mount front pivot bracket into support braces on trailer, if possible. If bracket cannot be mounted into support braces, reinforce mounting area with backer plate for adequate support. Before drilling any holes, make sure flex arm will have a clear pathway to operate.

STEP 2: Place pivot mount brackets on trailer in orientation shown below. Using brackets as guide, mark mounting hole locations.

RIVETS/CORRUGATIONS ON CENTER

RIVETS/CORRUGATION OFF CENTER

STEP 3: Remove rivets and mount brackets into rivet holes. If this is not possible, drill 13/32" holes in trailer. Fasten with 3/8" x 1-1/4" cap screws, flat washers, lock washers and nuts.

HORIZONTALLY CORRUGATED TRAILERS

NOTE: Use pivot bracket washers only when horizontal corrugation on trailer skin prevents bracket from contacting skin.

STEP 4: If installing pivot bracket or pivot mount bracket on horizontally corrugated trailer skin, center bracket between corrugations and use brackets as guide to mark hole locations. Mark and drill 13/32" holes in trailer and fasten with 3/8" x 1-1/4" cap screws (R), flat washers (JJ), lock washers (HH), pivot bracket washers (NN) and nuts (BB). Locate pivot bracket washers between pivot bracket and trailer skin as shown.

STEP 12: Fasten motor cover onto motor with #10 x 3/4" screws **(A)**.

STEP 13: Refasten tarp to roll tube with existing U-clamps and screws. Tighten all fasteners securely. Tighten front and rear flex arm connections.

NOTE: Verify flex arm is on vertical plane and parallel to face panel before proceeding. Make sure all fasteners holding motor to upper flex arm bracket are tightened securely.

REAR OF TRAILER

STEP 14: Place wrench on flex arm joint next to lower flex arm. Turn flex arm joint counter-clockwise (up) to move upper flex arm and Gate Flex™ from side to side.

STEP 15: Keep turning flex arm joint until Gate Flex™ is parallel to side of trailer and 90° to rear door.

NOTE: Do not overtighten or plastic insert will break.

FLEX ARM & GATE FLEX™ WILL MOVE SIDE TO SIDE

REAR OF TRAILER TOP VIEW

STEP 16: Drill 1/4" hole through lower flex arm and flex arm joint as shown. Install 1/4" x 1-3/4" spring pin into drilled hole.

STEP 17: Remove tension from rear arm by lowering roll tube to lowest position on side of trailer. Disconnect Gate Flex™ from splined shaft on roll tube. Remove carriage bolts and plates from lower arm. Slide bellow into position and re-assemble carriage bolts and plates. Tighten nuts and reconnect Gate Flex™ to splined shaft.

REAR OF TRAILER

STEP 1: Adjust roll tube forward or backward so end of splined shaft is 11" from center line of gate hinge pin.

STEP 2: Slide roll tube bearing pack completely over splined shaft on roll tube. Fasten with 3/8" x 2-1/2" cap screw **U** and centerlock nut **CC**.

NOTE: Do not remove splined shaft. Splined shaft will be needed if system is switched to manual operation.

STEP 3: Screw upper flex arm assembly into roll tube bearing pack. Drill 1/4" hole through bearing pack and secure flex arm joint to bearing pack with 1/4" x 1-1/2" spring pin.

NOTE: Do not leave unattended until flex arm is securely fastened to roll tube extension as shown.

WARNING

Flex arms are under tension while torsion springs are engaged. Use caution while assembling and disassembling arms. Failure to read and follow instructions could result in serious injury or death.

STEP 4: Align upper flex arm in vertical plane 90° to roll tube.

FRONT OF TRAILER

STEP 5: Slide tarp back on roll tube.

Fasten roll tube extension to motor mount bracket:

STEP 6A: Slide motor spacer over motor shaft.

STEP 6B: Slide roll tube extension over motor shaft. Fasten with 3/8" x 2" cap screws **S** and lock nuts **DD**. Finger tighten only.

STEP 7: Hold flex arm with motor and roll tube extension in vertical plane to trailer and 90° to roll tube. Mark and cut roll tube at location shown.

NOTE: Two people are required for safe installation.

STEP 8: Unfasten and remove motor from roll tube extension. Remove roll tube extension from roll tube. Cut roll tube at marked location.

STEP 9: Insert swaged end of roll tube extension w/drive shaft into roll tube. Align extension straight with roll tube and weld all around. Grind smooth.

NOTE: Pull roll tube away from tarp and trailer before welding to protect from weld spatter. Align roll tube extension straight with roll tube before welding so tarping system will roll smoothly.

NOTE: To prevent rust, paint all exposed metal, such as weld seams and/or metal exposed by grinding or cutting, with corrosion-resistant paint.

STEP 10: Slide roll tube/roll tube extension weldment back into position and align upper flex arm on front of trailer. Follow steps 6 A and B to install motor, positioning motor as shown below. Make sure torsion springs load when tarp opens.

⚠ WARNING
 Flex arms are under tension while torsion springs are engaged. Use caution while assembling and disassembling arms. Failure to read and follow instructions could result in serious injury or death.

STEP 11: Refasten and secure roll tube to electric motor shaft with 3/8" x 2" cap screw (S) and lock nut (DD). Install bearing spacers, radial ball bearings and bearing mount retainer and secure with 1/4" lock nuts (X).

NOTE: Verify flex arm is on vertical plane and parallel to face panel before proceeding. Make sure all fasteners holding motor to bearing mount plate to upper flex arm are tightened securely.

STEP 12: Fasten motor cover onto motor with #10 x 3/4" screws (A).

STEP 13: Refasten tarp to roll tube with existing U-clamps and screws. Tighten all fasteners securely. Tighten front and rear flex arm connections.

⚠ WARNING
 When transporting trailer, wiring from in-cab rocker switch must be connected to 4500 HD system on trailer. If motor is not connected to power while in transit, tarp may unwind and blow off.

STEP 1: Mount solenoid in battery box or other location protected from elements and road debris. Solenoid posts should face up.

STEP 2: Assemble conductor plug. Unfasten screw and remove insert from plug housing. Feed 6-ga. dual wire through plug housing. Strip insulation back 1/2" and insert bare wire strands into brass contacts. Ensure there are no loose wire strands that could short circuit. Tighten set screws to secure wires. Replace insert into plug housing and secure screw.

STEP 3: Route 6-ga. dual wire from conductor plug to solenoid and cut wire to length. Crimp and connect 1/4" ring terminals to rear two solenoid posts. Striped wire should be connected to right rear post. Orient wires so shield can be mounted over solenoid later.

NOTE: Cut wires to length and strip only enough wire insulation to install ring terminals. Insert bare wire into ring terminals and crimp securely.

STEP 4: Connect SMART™ circuit breaker to solenoid.

STEP 5: Connect SMART™ breaker to battery. Make jumper out of black 6-ga. wire (no stripe). Connect one end to battery negative post and bolt other ring terminal to SMART™ breaker. Insulate bolted connection with electrical tape.

NOTE: When splitting dual 6-ga. wire into separate halves to make jumper wires, use sharp knife to split webbing in order to prevent insulation from tearing and exposing metal strands.

STEP 6: Locate ShortStop™ circuit breaker within 1' of battery positive post. Make jumper wires out of 6-ga. wire (with stripe) for connecting ShortStop™ breaker between positive battery post and positive solenoid post. Connect breaker to positive solenoid post, but do not connect breaker to positive battery post at this time.

STEP 7: Mount rocker switch in cab in convenient location on dash panel or door jamb. Crimp female quick disconnects and connect to rocker switch as shown.

STEP 8: Route 14-ga. 3-conductor cable between rocker switch and solenoid.

STEP 9: Mount solenoid cover over solenoid and tighten fasteners.

STEP 10: Connect ShortStop™ breaker to battery positive post and test operation.

OPERATION

A) Check motor direction by activating switch to OPEN. If switch is running system backwards, swap green and black quick disconnects on solenoid.

B) Close tarp: Push switch to CLOSE and hold. Observe tarp and release switch when tarp is fully closed.

C) Open tarp: Push switch to OPEN and hold. Observe tarp and release switch when tarp is fully open, but before it tightens against tarp stops.

NOTE: Release switch at end of cycle or SMART™ circuit breaker will trip. SMART™ breaker will reset after rocker switch is released. SMART™ breaker should always trip before ShortStop breaker™.

NOTE: Wire lengths are predetermined. Before installing SMARTwire™ components, review and confirm wire routing so wires reach components with ample room for connection.

DUAL CONDUCTOR

STEP 1: Locate dual-pole conductor socket near 7-pole conductor socket as shown. Determine location and drill 2" hole through trailer skin.

STEP 2: Align socket over 2" hole. Using holes in flanges on socket as guide, mark and drill two 5/16" holes.

STEP 3: Fasten conductor socket to trailer with 5/16" x 3/4" cap screws (J), flat washers (FF) and nuts (Y).

CAUTION

Do not cut SMARTwire™. Bind excess wire with cable ties.

WIRING SCHEMATIC

STEP 1: Connect SMARTwire™ from electric motor to SMARTwire™ from dual-conductor and secure connection with lock pin. Secure all wires to trailer with cable clips and screws. If needed, use cable ties.

NOTE: Coat each connection with dielectric grease (P/N 1704378) to prevent corrosion.

CAUTION

Check all hardware for complete assembly before operating. Inspect system at this time and adjust as required.

OPERATION:

A) Check motor direction by activating switch to *OPEN*. If switch is running system backwards, change wire leads on dual-conductor plug to opposite connections.

B) Close tarp: Push switch to *CLOSE* and hold. Observe tarp and release switch when tarp is fully closed.

C) Open tarp: Push switch to *OPEN* and hold. Observe tarp and release switch when tarp is fully open.

NOTE: Release switch at end of cycle or modified-reset circuit breaker will trip. After breaker resets, switch will activate motor again. To reduce unnecessary strain on tarp components, release switch at end of each cycle.

MOUNT CIRCUIT BREAKER AS CLOSE TO POWER SUPPLY AS POSSIBLE

ENCODER WIRE FOR SMART2™ & SMART3™ SYSTEMS

STEP 1: Mount circuit breaker as close as possible to battery or power supply.

STEP 2: Unfasten and remove insert from conductor plug. Feed 6-ga. wire through plug and into brass contacts on insert. Tighten set screws to secure wires. Replace insert into conductor plug and secure screw.

NOTE: Wire lengths are predetermined. Before installing SMARTwire™ components, review and confirm wire routing so wires reach components with ample room for connection.

DUAL-CONDUCTOR SOCKET

STEP 1: Locate dual-pole conductor socket near 7-pole conductor socket as shown. Determine location and drill 2" hole through trailer skin.

STEP 2: Align socket over 2" hole. Using holes in flanges on socket as guide, mark and drill two 5/16" holes.

STEP 3: Fasten conductor socket to trailer with 5/16" x 3/4" cap screws (J), flat washers (FF) and nuts (Y).

CAUTION
Do not fasten SMARTwire™ components to trailer through hopper walls.

SHUR-CO® WIRELESS RECEIVER

STEP 1: In order to clear travel area of front arm, locate Shur-Co® wireless receiver as low as possible on front of trailer. Determine location and drill 2" hole through trailer skin.

STEP 2: Align holes in wireless receiver over 2" hole in trailer as shown below. Using holes on flanges on receiver as guide, mark and drill four 5/16" holes as shown.

STEP 3: Install grommet into 2" hole. Insert wire from wireless receiver through grommet.

STEP 4: Align holes on wireless receiver with holes on trailer. Fasten receiver to trailer with 5/16" x 7/8" cap screws **(K)**, lock washers **(GG)** and nuts **(AA)**. Adhere warning decal P/N 1705546 above receiver in location shown.

WIRING SCHEMATIC

STEP 1: Connect SMARTwire™ from wireless receiver to SMARTwire™ from electric motor. Connect SMARTwire™ plug from wireless receiver to SMARTwire™ from dual-conductor socket. Secure connections with lock pins. If you have SMART3™ or SMART2™ system, connect encoder wire from receiver to encoder wire from motor. Secure wires to trailer with cable clips and screws. If needed, use cable ties.

NOTE: Coat each connection with dielectric grease (P/N 1704378) to prevent corrosion.

CAUTION

Check all hardware for complete assembly before operating. Inspect system at this time and adjust as required.

NOTE: Receiver may be pressure washed, but keep nozzle at least 3' from system while spraying.

STEP 2: Check motor direction by pressing either button. If button is released and operation continues, system is in *Express Mode*. To stop operation, press button again. If switch is running system backwards, program remote to wireless receiver and rewire as directed in troubleshooting guide in remote instructions.

NOTE: 4500 Series HD trailer-mounted control boxes now operate in **EXPRESS MODE**. Pressing **O** or **C** button on control box initiates express open or close operation. After that, pressing either button will stop tarp operation. If neither button is pressed, operation will automatically stop at end of travel. On SMART2™ systems, if travel stops are not set, trailer-mounted control box operates in **MANUAL (momentary) MODE**. Remotes for both systems are shipped with tarp channel set to **EXPRESS MODE** and can be configured as desired.

NOTE: Tarp systems will operate in **EXPRESS MODE** when using buttons on trailer-mounted control box, if encoder wires are connected. For SMART2™ systems, travel stops must also be set, otherwise you must press and hold buttons. When in **EXPRESS MODE**, press and release buttons to open and close tarp (operation will continue until complete after releasing button). When in **MANUAL MODE**, press and hold buttons (operation will stop if button is released). See remote instruction manual for detailed instructions on remote operation.

NOTE: Tarp systems operate in **EXPRESS MODE** when commanded to operate from buttons on trailer-mounted control box. Closing remote lid or pressing select button will not stop system in this case. Pressing **OPEN** or **CLOSE** button on remote will stop system if in range.

NOTE: Tarp systems operate in **EXPRESS MODE** when using buttons on trailer-mounted control box, if encoder wires are connected. For SMART2™ systems, travel stops must also be set. Otherwise you must press and hold buttons (see remote instructions for SMART2™ systems).

STEP 3: Remove retaining ring on rear flex arm. Carefully slide arm off pivot pin.

STEP 4: At front of trailer, remove 3/8" x 2" cap screw **S** and lock nut **DD** from motor shaft and roll tube extension connection.

STEP 5: Install crank arm assembly as shown in Shur-Lok® owner's manual. Manual may be viewed at <http://www.shurco.com>. You may need optional manual override extension kit (P/N 1117022).

REMOVE EXISTING MOTOR

STEP 1: Disconnect electric power to trailer. Unfasten and remove motor cover. Unfasten 3/8" x 2" cap screw **S** and lock nut **DD** holding motor shaft to roll tube extension.

NOTE: Leave roll tube fastened to motor bracket.

STEP 2: Disconnect electric wires from motor terminals and encoder wire.

STEP 3: Unfasten and remove only 5/16" lock washers and hex nuts holding motor to motor bracket/front arm assembly, leaving motor mount bearing retainers in place. Remove existing motor.
