YES

This module is compatible with SMART2™ remotes, version 9 or newer.

All previously purchased SMART2™ remotes are upgradable.

To check the version of your remote:
• Go to **SETUP MENU**
• Go to **INFORMATION**

If your remote is version 8 or older, contact Shur-Co®, LLC for upgrade options.

ONLY END USER MAY REMOVE THIS LABEL.

NOTICE!
READ LABEL PRIOR TO PROGRAMMING.
1-866-748-7435 • www.SHURCO.com

The SMART2™ LiteALL™ is only compatible with Version 9 (V9) or newer SMART2™ remotes. (Any SMART2™ which was shipped on or after March 27, 2013 was shipped with Version 9.) To check the version of your remote, simply go to the SETUP menu, then to INFORMATION; the version will be listed. This information is also provided on the peel-away decal on your Lite-ALL™ module (see above).

If you are adding a SMART2™ LiteALL™ to an existing ProTrap® or 4500 Series that has been operating with a Version 8 (V8) remote, you will need to update the receivers of these devices. The receivers are in the gray boxes where the push buttons are located. Access inside of this box is NOT necessary, as the update is done wirelessly.

All older-version SMART2™ remotes are easily upgradable:
1. Call Shur-Co® to assign an RMA#.
2. Bring your remote to any Shur-Co® branch location, where it will be upgraded for a $25 service fee.
3. Mail in the remote (you will have to pay postage both ways, as well as the $25 service fee) to Shur-Co's corporate offices.

Once your V8 remote has been updated to V9, the remote will then prompt you to update your 4500 or ProTrap® receiver when you select the device from the main menu (see screen shot at left). Select YES to allow the remote to update the receiver. Repeat this process for all V8 receivers.
