

How have the GustBuster™ tarp cords changed, and why?

What has stayed the same? The GustBuster's exclusive and innovative design is like no other tarp cord in the industry! The cords attach permanently to your trailer to hold down the tarp and keep it from flipping in the wind – and perhaps taking you with it. A unique dual-grommet design accommodates both 96" and 102" trailer widths.

Moisture-resistant polyester construction reduces the chance of dirt and grime becoming embedded in the webbing. This keeps the cords from turning brittle and abrasive over time. Durable stretch membrane is integrated throughout the webbing, so it won't bunch up on one side of the trailer. The flat profile of the cords holds contact with the tarp, for better wear and extended tarp life.

What has changed? Worth noting is the change to aluminum grommets from those previously made from brass. The aluminum construction of the grommet and bushing helps to prevent corrosion, upping the resistance factor, and also better matches the mounting screw in color than the brass grommets did.

For additional information about Shur-Co® products, give us a call at **1.800.474.8756** Monday through Friday, from 8:00 a.m. to 5:00 p.m. Central Time. Our friendly and knowledgeable Customer Service Representatives will be happy to answer your questions. Or log on to our website at www.shurco.com.

Top: GustBuster™ tarp cords belt on and stay on. Inset: The grommeting has changed to a smaller size and different composition for improved corrosion resistance and a more balanced appearance. Below: The dual-grommet design lets you fit the two most common widths of today's trailers.
